

Security at New Life Village

Providing safety and security to our families

Project Scope

New Life Village is a gated community with a large administrative building and three existing homes that will serve 15-18 families in 2023.

In order to secure the area, we are in need of an access control system and have identified a system that will meet all of our needs. This system includes maglocks and key strikes to keep doors locked, exit buttons, and keypad/code readers at each door and at the front gate.

Impact

A sense of security is critical to providing the safe, nurturing environment our families need to move forward as they leave behind the trauma of homelessness.

Providing reliable 24/7 access control and surveillance will not only allow us to monitor the safety of our families and staff, but also to detect unauthorized activity. If an incident does occur, having clear timestamps saves valuable staff time and makes verifying camera footage exponentially easier.

Furthermore, building access can be restricted so employees, contractors and families only have access to the buildings they need to enter.

Timeline

Project completion goal is February 28, 2023.
